Abstract

Clearance system is very essential and is implemented in all organizations; it is used to confirm that the applicant has paid all expenditures before leaving the organization. Current clearance system in QUEST is manual and students have to complete their clearance certificate manually to show all paid/cleared expenditures from concerned departments to prove that they are allowed to receive their concerned documents. This system is very ineffective and time consuming system.

Therefore, there is a need of online system for clearance. In this regard, the solution is provided in which clearance certificate of student will be completely filled online by showing their paid/cleared expenditures from concerned departments.

The project is developed using ASP.Net to create interfaces of online system for concerned persons of different departments and Database to store all the required information of students for clearance certificate via web pages.
